USER ACCEPTANCE TESTING (UAT) REPORT

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date: 03 October 2026

Team ID: SWTID-2026-2670

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Maximum Marks: As per UAT assessment

Project Overview

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description: A Flow Designer-based workflow that automates standard laptop procurement from request submission through validation, approval, procurement initiation, notifications, tracking, and exception handling.

Project Version: 1.0 (planned UAT version)

Testing Period: To be completed

Testing Scope

• Standard laptop request submission.

• Validation of required request information and standard-laptop eligibility.

• Automated approval routing.

• Approval and rejection processing.

• Procurement/order action after approval.

• Requester notifications and status updates.

• Request tracking through the procurement lifecycle.

• Exception handling for non-standard requests, incomplete requests, and workflow failures.

User Stories / Requirements to be Tested:

• USN-1: Submit a standard laptop request.

• USN-2: Define and use standard laptop options.

• USN-3: Capture required request information.

• USN-4: Validate standard laptop requests.

• USN-5: Route requests for approval.

• USN-6: Automate the standard laptop order flow.

• USN-7: Automate approval routing.

• USN-8: Initiate procurement/order action.

- USN-9: Send request status notifications.
- USN-10: Track the request.
- USN-11: Test standard and exception scenarios.

Testing Environment

Field	UAT Value
URL / Location	To be provided by project team
Application / Platform	IT service management platform with Flow Designer
Credentials	To be provided securely by project team; do not record passwords in this document
Test Data	Standard laptop request data and approved/non-standard test scenarios
Environment	UAT / Test environment

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Submit valid standard laptop request	1. Open laptop request form. 2. Select an approved standard laptop. 3. Enter all required information. 4. Submit request.	Request is created successfully and enters the defined validation/approval flow.	To be recorded during UAT	Not Executed
TC-002	Submit request with missing required information	1. Open laptop request form. 2. Leave a required field blank. 3. Submit request.	Request is prevented from progressing and the missing information is identified.	To be recorded during UAT	Not Executed
TC-003	Validate standard laptop eligibility	1. Submit a request using a standard laptop option. 2. Allow the flow to run.	The request passes the standard-laptop validation rules.	To be recorded during UAT	Not Executed
TC-004	Route request to approver	1. Submit a valid standard	The request is automatically routed to the	To be recorded during	Not Executed

		laptop request. 2. Observe the workflow after validation.	configured approver.	UAT	
TC-005	Approve standard laptop request	1. Open an assigned approval. 2. Review request details. 3. Approve the request.	Approval is recorded and the request progresses to the procurement action.	To be recorded during UAT	Not Executed
TC-006	Reject standard laptop request	1. Open an assigned approval. 2. Reject the request. 3. Observe request status.	Request stops or follows the rejection path and the requester receives the appropriate status.	To be recorded during UAT	Not Executed
TC-007	Trigger procurement action after approval	1. Submit a valid request. 2. Complete required approval. 3. Observe the next workflow action.	The configured procurement/order action is initiated after approval.	To be recorded during UAT	Not Executed
TC-008	Send requester status notification	1. Progress a request through a configured workflow stage. 2. Check requester notifications.	The requester receives the configured notification with the appropriate status information.	To be recorded during UAT	Not Executed
TC-009	Track request status	1. Submit a laptop request. 2. Progress it through validation and approval. 3. Review request status.	The request status accurately reflects the current workflow stage.	To be recorded during UAT	Not Executed
TC-010	Handle non-standard laptop request	1. Submit a request that	The request is routed to the	To be recorded	Not Executed

		does not meet standard laptop criteria. 2. Allow validation to run.	configured exception/manual-review path rather than being processed as a standard order.	during UAT	
TC-011	Handle workflow/procurement action failure	1. Execute a controlled test failure or unavailable downstream action. 2. Observe workflow behavior.	Failure is handled through the defined exception path and does not silently complete the request.	To be recorded during UAT	Not Executed
TC-012	End-to-end standard laptop order	1. Submit valid request. 2. Complete validation. 3. Complete approval. 4. Trigger procurement action. 5. Verify notification and status.	The request completes the intended standard workflow from submission through procurement action with correct status and notifications.	To be recorded during UAT	Not Executed

Bug Tracking

Record any failed test case or defect using the following format. No defects are pre-populated because actual UAT execution results were not provided.

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	To be recorded during UAT	To be recorded during UAT	Low/Medium/High	Open/In Progress/Closed	To be recorded
BG-002	To be recorded during UAT	To be recorded during UAT	Low/Medium/High	Open/In Progress/Closed	To be recorded

UAT Acceptance Criteria

- All critical standard-path test cases should pass before deployment.
- Negative scenarios should follow the defined rejection or exception path.
- Approval routing and procurement actions should execute according to the configured rules.
- Requester notifications and status tracking should provide accurate information.
- Any open high-severity defects should be reviewed before deployment.

Sign-off

Role	Name	Date	Signature	Status
Tester	To be completed	To be completed	To be completed	Pending
Project Manager	To be completed	To be completed	To be completed	Pending
Product Owner	To be completed	To be completed	To be completed	Pending

Notes

- Ensure that test cases cover both positive and negative scenarios.
- Testers should provide detailed feedback and suggestions for improvement.
- Bug tracking should include severity, status, and reproduction steps.
- Actual test results must be entered after UAT execution.
- Obtain sign-off from the project manager and product owner before deployment.
