Project Design Phase
Proposed Solution Template

Date	01 October 2026
Team ID	SWTID-2026-2670
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	IT procurement of standard laptops often involves repetitive manual activities such as validating requests, checking approvals, creating purchase orders, and coordinating fulfillment. This can cause delays, inconsistent processing, and unnecessary administrative effort.
2	Idea / Solution description	Build an automated workflow in Flow Designer for standard laptop requests. When an eligible request is submitted, the flow validates required information, routes the request for approval, creates or triggers the required procurement action, updates the request status, and notifies the requester. Standard laptop orders follow a predefined path with minimal manual intervention.
3	Novelty / Uniqueness	The solution applies workflow automation specifically to a standardized laptop procurement process. Reusable flow logic, predefined approval rules, and automated notifications create a consistent end-to-end process while allowing exceptions to be routed for manual review.
4	Social Impact / Customer Satisfaction	Faster and more transparent procurement gives employees quicker access to required laptops and reduces follow-up effort. Automation also reduces repetitive work for IT and procurement teams, improves status visibility, and supports a more consistent customer experience.
5	Business Model (Revenue Model)	The solution is an internal process-automation initiative rather than a direct revenue-generating product. Its business value comes from reducing procurement processing time, manual effort, errors, and operational overhead. The same automation approach can support additional IT procurement categories.
6	Scalability of the Solution	The workflow can be expanded by adding more standard device models, accessories, approval rules, suppliers, and procurement scenarios. The design can also be reused for other standardized IT requests, with exception handling for non-standard or high-value purchases.
