Project Development Phase

Model / Flow Performance Test

Date	01 October 2026
Team ID	SWTID-2026-2670
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Technology	ServiceNow Flow Designer
Project Type	IT Procurement Automation

Project team shall fill the following information in the performance testing template.

S.No.	Parameter	Values	Screenshot
1	Flow Summary	Automated Flow Designer workflow for standard laptop procurement requests. The flow validates the request, checks required conditions/approvals, creates or updates the procurement task, and routes the request to the appropriate fulfillment process.	Attach Flow Designer screenshot
2	Automation Performance	Trigger: Standard laptop procurement request Actions: Validate request → approval/condition check → create procurement/fulfillment task → notify requester	Attach flow execution screenshot
3	Success Criteria	Valid standard laptop requests should move through the configured flow without manual routing. Required approvals and task creation should occur according to the configured conditions.	Attach successful test screenshot
4	Test Result	To be filled after execution: Passed / Failed / Passed with observations	Attach test result screenshot

5	Fine Tuning Result (if Done)	Record any changes made to conditions, actions, approvals, notifications, or flow logic after testing.	Attach updated flow screenshot
6	Validation Result	To be filled after validation testing: Validated / Requires changes	Attach validation screenshot

Suggested Test Cases

Test Case	**Input / Condition**	**Expected Result**	**Actual Result**	**Status**
TC01	Valid standard laptop request	Flow triggers and proceeds through configured steps		
TC02	Missing required request information	Flow stops or routes for correction according to configuration		
TC03	Approval required	Approval is generated and flow continues after approval		
TC04	Request approved	Procurement/fulfillment task is created and requester is notified		
TC05	Request rejected	Flow follows rejection path and requester receives notification		

Note: This project is primarily a workflow/process automation project using ServiceNow Flow Designer. Therefore, traditional ML metrics such as training accuracy and validation accuracy are not applicable unless a separate AI/ML model is incorporated.
