Tableau Template

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Use this template to document the Tableau workbook, dashboard design, data preparation, calculations, filters, and performance testing for the project.

Project Development Phase

Field	Project Information
Performance Test Date	03 October 2026
Team ID	SWTID-2026-2670
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	10 Marks
Tableau Workbook Name	Laptop_Order_Automation_Dashboard (v1.0)
Prepared By	Bhavani. V (Team Leader), Dhanusha. S (Team Member), Janani. K (Team Member), Danushtiya. V (Team Member), Kavipriya. K (Team Member)
Review Date	03 October 2026

1. Project Objective and Scope

Item	Template Entry
Business objective	Reduce manual effort and cycle time for standard laptop requests by automating order routing and fulfillment through Flow Designer.
Primary users	IT procurement, service desk, approvers, fulfillment teams, and management.
In scope	Standard laptop order volume, request status, approval time, fulfillment time, SLA performance, exceptions, automation adoption, and cost/value indicators.
Out of scope	Non-standard or custom hardware orders, vendor contract negotiation, and physical device imaging and deployment.
Success measures	Shorter request-to-order time, higher straight-through processing, fewer rework/escalations, and improved SLA compliance.

2. Dashboard and Story Design

View / Story Point	Purpose	Visualizations / Graphs	Tableau Sheet Name
Executive Overview	Show overall procurement performance and automation impact.	KPI cards; trend line; status bar; exception count.	Executive Overview
Order Funnel	Track requests from submission through fulfillment.	Funnel or stacked bar; conversion/drop-off indicators.	Order Funnel
Cycle Time Analysis	Identify delays across request, approval, ordering, and delivery stages.	Box plot or bar chart; median and percentile KPIs.	Cycle Time
SLA and Exceptions	Monitor overdue orders and causes of failure/rework.	Heatmap; exception Pareto; SLA compliance gauge.	SLA and Exceptions
Flow Designer Impact	Compare automated versus manual processing.	Before/after bars; automation adoption trend; time saved KPI.	Flow Designer Impact
Detail Drilldown	Allow users to inspect individual orders.	Table with filters, tooltips, and drillthrough action.	Order Details

3. Data Rendered

Dataset / Source	Key Fields	Refresh / Grain
Procurement requests	Request ID, requested date, requester, location, laptop model, priority, status	Daily / one row per request
Flow Designer execution log	Flow run ID, trigger time, outcome, error, approval route, automation flag	Daily / one row per flow run
Order and fulfillment data	Order ID, supplier, order date, delivery date, fulfillment status, cost per order	Daily / one row per order
Reference tables	SLA targets, standard laptop catalog, departments, calendar	Monthly / reference records

4. Data Preprocessing

Step	Transformation / Validation	Status
Data connection	Connect to the procurement and Flow Designer source tables using an authenticated data connection.	Completed
Data cleaning	Remove duplicates, handle null IDs, standardize status and department labels.	Completed
Date preparation	Create request, approval, order, and delivery date fields; validate timezone.	Completed
Joins / relationships	Join request, flow, order, and fulfillment data using Request ID and Order ID as keys.	Completed
Calculated durations	Create elapsed-time fields and exclude invalid or negative durations.	Completed
Quality checks	Reconcile row counts, unmatched IDs, missing dates, and invalid statuses.	Completed

5. Calculation Fields Used

Calculation Field	Definition / Formula	Business Use
Total Requests	COUNTD([Request ID])	Total demand volume.
Automated Requests	COUNTD(IF [Automation Flag] = TRUE THEN [Request ID] END)	Volume processed through Flow Designer.
Automation Rate	[Automated Requests] / [Total Requests]	Adoption of automated processing.
Approval Hours	DATEDIFF('hour', [Submitted At], [Approved At])	Approval bottleneck analysis.
Fulfillment Hours	DATEDIFF('hour', [Order Created At], [Delivered At])	Supplier and delivery performance.
End-to-End Hours	DATEDIFF('hour', [Submitted At], [Delivered At])	Overall request-to-delivery cycle time.
SLA Compliance %	SUM(IIF([End-to-End Hours] <= [SLA Target Hours],1,0)) / COUNT([Request ID])	SLA performance.
Exception Rate	COUNTD(IF [Flow Outcome] <> 'Success' THEN [Request ID] END) / [Total Requests]	Reliability and rework monitoring.
Estimated Hours Saved	([Manual Baseline Hours] - [Automated Hours]) * [Completed Requests]	Quantify efficiency benefit.

6. Utilization of Filters and Interactivity

Filter / Control	Type	Default / Allowed Values	Purpose
Date range	Range filter	Last 90 days	Analyze current or historical performance.
Request status	Multiple values	Submitted, Approved, Ordered, Delivered, Cancelled, Exception	Focus on lifecycle stages.
Automation flag	Single value	All, Automated, Manual	Compare Flow Designer impact.
Laptop model / category	Multiple values	All standard laptop models in the catalog	Analyze standard configuration demand.
Department / location	Multiple values	All departments and locations	Identify demand and performance variation.
Supplier	Multiple values	All approved suppliers	Compare fulfillment performance.
Priority / SLA status	Multiple values	High, Medium, Low; Within SLA, At Risk, Breached	Prioritize risk and overdue orders.

7. Performance Test

S.No.	Parameter	Values / Target
1	Data Rendered	4 data sources (requests, Flow Designer log, orders and fulfillment, reference tables); daily refresh
2	Data Preprocessing	6 cleaning and transformation steps
3	Utilization of Filters	7 filters and controls; target filter response under 2 seconds
4	Calculation Fields Used	9 calculation fields (volume, automation rate, cycle-time, SLA, exception, and time-saved measures)
5	Dashboard Design	No. of visualizations / graphs: 6 views (Executive Overview, Order Funnel, Cycle Time, SLA and Exceptions, Flow Designer Impact, Order Details)
6	Story Design	No. of visualizations / graphs: 6 story points, following the order of the dashboard views
7	Workbook Performance	Target initial load under 5 seconds; filter response under 2 seconds
8	Data Accuracy	KPIs reconciled to source totals using row counts, unmatched IDs, and missing dates

8. Validation Checklist

- KPIs reconcile to source totals.
- Automated and manual populations are mutually understood.
- Date filters include correct time zone and boundaries.
- Null, duplicate, and unmatched records are documented.
- Tooltips and labels are clear.
- Dashboard is usable at target screen size.
- Sensitive procurement data is appropriately restricted.
- Workbook refresh and extract schedule are documented.

9. Findings and Recommendations

Focus Area	Impact	Recommended Action	Owner
Approval stage delays	High	Track Approval Hours on the Cycle Time view and add escalation reminders for pending approvals.	Bhavani. V
Automation adoption	Medium	Monitor Automation Rate and move remaining manual standard laptop requests into the automated flow.	Dhanusha. S
Exceptions and rework	Medium	Review the exception Pareto regularly and fix the most common flow failure causes.	Danushtiya. V

10. Sign-off

Role	Name	Signature / Approval	Date
Project Team	Bhavani. V		03 October 2026
Project Team	Dhanusha. S		03 October 2026
Project Team	Janani. K		03 October 2026
Project Team	Danushtiya. V		03 October 2026
Project Team	Kavipriya. K		03 October 2026
